# PRODUCTS & SOLUTIONS

## XaaS

### Cybersecurity\*

Calian keeps you one step ahead of any security threats with our **24x7x365** support, efficient security management, and threat intelligence.

### Communication\*

This all-in-one business communications solution by Calian improves communication, efficiency and productivity with guaranteed success through team collaboration and communication.

### LiveSupport\*

Calian's cloud-based platform for seamless transition from chat to call allows businesses to communicate effectively with their customers.

### Connectivity\*

Not only will we help you with password resets for the applications we manage, but we can additionally assist with password resets for your critical business applications.

### Productivity\*

Grow your business with productivity tools that will sort your incoming and outgoing information across a wide range of Microsoft Office applications.

### Systems\*

Supporting small, medium, and large businesses by monitoring and management of on-premise and data center networking, and server infrastructure.

### Workstation\*

The best experience for every stakeholder through management and support of hardware and software. Keeping your network fully secure by scanning your device for issue resolution & patches deployment.

## Cybersecurity

### Assets & Vulnerability

Dealing with IT services, vulnerabilities are most likely to occur. Hardware, infrastructure or operating systems are at constant risk. At Calian, the focus is on keeping your assets safe and secure against any cyber threats.

### Risk & Maturity

Multi-layered security assessments utilizes standardized criteria which helps set a benchmark for risk management and mitigation strategies. With constant security threats, we measure your organization's journey and work towards improvement & risk mitigation.

### Remediation

We make sure that you are prepared for anything that may come your way with effective and prepared recovery planning. The foundation of this plan is a robust data backup and an appropriate solution that aligns well with your business needs.

### Awareness Training

Enhance security across the board with proper training on the evaluation of technologies and the threats that come along with.

### Assessments

At Calian, we examine your security controls by defining the existing security plan and upgrading it by reviewing compliance requirements to see how they stack up against any potential or hidden vulnerabilities.

### Penetration Testing

Penetration testing is an effective means of proactively finding and fixing holes in your cybersecurity defense. By simulating an attack, you can see exactly how your network and your team would hold up in a live-fire situation. We have 15 years of experience in this process. If there's a way into your network, we'll find it.

## Enterprise Solutions

### Hybrid & Private Cloud

Experience the best of both worlds with hybrid as well as private cloud computing with one-stop solutions at Calian. Share your cloud computing across organizations, within your own infrastructure, or at both public and private levels at the same time.

### Public Cloud

Experience the freedom of public cloud with Calian where a third party offers and runs the services via the public internet. Unlike the private cloud, public infrastructure allows access to unlimited computer resources and there is practically no downtime.

### Digital Infrastructure & Networking

Create a backbone that connects computers and devices across departments and workgroup networks to facilitate insight and data accessibility.

### SD-Wan

Calian's Software-defined Wide Area Network (SD-WAN) helps businesses achieve more by boosting security, improving network performance, and reducing storage costs. SD-WANs utilize software to manage and control data, applications, and services between remote locations and data centers. It also improves network reliability by enabling real time fail over in case of an outage and saves customers money over traditional network solutions.

### Integration Services

From planning to implementing, we can handle your organization's data and server integration needs. Our integration team supports our engineering team to make sure you get the gear that you need, set up the right way. We utilize a methodical approach to fulfillment, allowing us to accommodate multiple locations and teams of up to 500 members.
